	Application No.	Applicant(s)				
	10/660,521	KAFER, GISBERT WOLFGANG				
Office Action Summary	Examiner	Art Unit				
	Edward M. Johnson	1754				
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status	•					
1) Responsive to communication(s) filed on 29 A	<u>ugust 2005</u> .	•				
	action is non-final.					
3) Since this application is in condition for allowance except for formal matters, prosecution as to the						
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.

#### DETAILED ACTION

#### Priority

Receipt is acknowledged of papers submitted under 35
 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

# Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The abstract of the disclosure is objected to because it is longer than a single paragraph and uses the legal term, "means" throughout. Correction is required. See MPEP § 608.01(b).

## Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

Application/Control Number: 10/660,521 Page 3

Art Unit: 1754

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, lines 6 and 9, "the SCONOx principle" and "the SCOSOx principle" lack antecedent basis and are "brand names" according to Applicant's specification, which would render the claimed subject matter indefinite to one skilled in the art, since the meaning of a trademark or brand name can change significantly over time.

Claim 1, lines 15-16, "the regeneration cycle" lacks antecedent basis or is unclear as to which cycle is being referred to.

## Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/660,521

Art Unit: 1754

7. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Campbell et al. US 5,665;321.

Regarding claim 1, Campbell '321 discloses a process for decreasing NOx, CO and SOx comprising oxidizing in a catalyst absorber, regenerating in demineralized water and reusing the absorber (abstract and column 5, lines 45-64), wherein the regeneration is repeated (Examples).

Campbell fails to disclose the SCONOx and SCOSOx principles.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to operate the process of Campbell according to the SCONOx and SCOSOx principles in view of Applicant's admission that such absorber principles are known and published in the art and "described in detail" (instant specification page 1), and it would have been obvious to an ordinarily skilled artisan to use such known and detailed "brand name" publications.

Regarding claims 2-6, Campbell discloses regeneration by washing for 5 minutes with stirring and then stirring and soaking for 2-5 to 20 minutes (see column 5, lines 50-52 and 56-57), which would be substantially longer. It would have been further obvious to an ordinarily skilled artisan to apply either of these regeneration steps to a first or second step treatment

Application/Control Number: 10/660,521 Page 5

Art Unit: 1754

of the disclosed treatment of carbon monoxide, NOx, and/or SOx, separately or in combination.

# Double Patenting

The nonstatutory double patenting rejection is based on a 8. judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.q., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

9. Claims 1-6 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6 of copending Application No. 10/660,523. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one of ordinary skill in the art at

Art Unit: 1754

the time the invention was made to claim a plurality of parallel absorber chambers and purging the first section before the start because it would have been within the purview of one of ordinary skill to take such a step in a parallel plurality of chamber to remove remaining contaminants with the purge to perform the regeneration step as disclosed.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

#### Conclusion

- 10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Brocoff 4,012,488 discloses a process for treatment of sulfur and nitrogen oxides comprising a catalyst chamber (abstract, Figures); Haas US 4,804,522 discloses a process for removing SOx and NOx compounds from gas streams comprising absorbing SOx, regenerating, absorbing NO, regenerating, and converting the absorbed SOx and NO pollutants (see abstract and Examples).
- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edward M. Johnson whose telephone number is 571-272-1352. The examiner can normally be reached on M-F 9:30-6:00.

Art Unit: 1754

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley S. Silverman can be reached on 571-272-1358. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
